CAMS WEEKLY REPORT

Week of 20 August - 26 August 1977

1. We are planning to provide a limited version of CAMS in the GC-03 center during the power outage scheduled for the 10th and 11th of September. Service will be provided to four (4) Area-58 terminals and four (4) Headquarters terminals. The CAMS database will be in a retrieve-only mode allowing no update capability. There will be no message traffic processed against this GC-03 version.
2. Division A needs more space by October to accomodate the addition of contractor personnel to the project. Plans are being formulated to try and accomodate us in the [REDACTED] Building.
